Dear Hiring Manager,

I am writing to express my strong interest in the Java/Python Developer position at TMC Canada in Montreal. With 10 years of professional software engineering experience specializing in advanced object-oriented design, distributed systems, and modern backend application architecture, I am highly confident in my ability to immediately deliver robust software solutions that support your engineering goals.

Throughout my career, I have excelled at designing high-availability RESTful web services, optimizing complex relational and NoSQL database infrastructures, and engineering high-throughput, event-driven distributed components using messaging architectures. Furthermore, I bring hands-on experience integrating secure development practices, role-based access tokens, and automated containerization workflows into enterprise CI/CD pipelines. Collaborating with cross-functional global teams to translate complex business needs into resilient technical realities has consistently defined my engineering trajectory.

TMC's unique Employeneurship model perfectly matches my passion for technical innovation and professional mastery. I look forward to the opportunity to discuss how my practical experience in component re-architecting, performance optimization, and reliable backend system design can drive immediate value for your high-tech consulting team.

Sincerely,

Shervin Naseri
